

Become the defining provider of broadband wireless solutions and services

Founded in 2005, NexAira is a privately-held, venture-capital financed company with thirty employees. NexAira is headquartered in San Diego, with offices in Atlanta, Kansas City, Seattle and Vancouver.

NexAira, Inc. is a leading provider of wireless broadband data solutions. NexAira enables mobile operators, enterprises and home office users to expeditiously connect to, maintain and manage high-speed data connections rivaling traditional landline connectivity, with unmatched functionality, speed to market and ease of use. NexAira's wireless broadband data solutions combine an intuitive user interface with advanced firmware, middleware and management solutions, which ensure that users always benefit from the industry's most advanced features and functionalities. NexAira's customized networking devices are simple to install, yet provide the advanced management capabilities demanded by the most sophisticated users.

NexAira delivers these solutions with custom configuration, branding and fulfillment services for mobile and fixed data applications. NexAira's reliable, secure, over-the-air technologies, including self-provisioning and self-activation for "zero touch" deployments, accelerate customers' adoption and enjoyment of new broadband data services, features and revenue opportunities. These technologies are dramatically less complex and expensive than wired networks, extending product life cycles and lowering total cost of ownership.

Cell South, CBeyond, other leading service providers and hundreds of other customers have selected NexAira's wireless broadband data solutions to dramatically decrease the cost and management of firmware maintenance, enabling them to bring customized wireless broadband solutions to market more quickly. NexAira's solutions have been utilized in more than 175,000 wireless broadband data devices deployed by more than 750 carriers, service providers and other customers worldwide.

The Company's hardware-agnostic broadband router firmware is used by service providers, enterprises and in residential markets throughout North and South America and Africa, with additional sales pending in Europe. The intuitive user interface enables a non-technical user to quickly and effortlessly setup a network and establish a secure Internet connection. In addition, the superior management tools and reliable operating design supports the needs of the largest customer networks. The Router Web 2.0, AJAX compliant I³ (Intuitive, Iconic, Interactive) Graphical User Interface (GUI), allows easy integration of applications, existing management systems and user customization.

NexAira's routing solutions provide data, voice and video capabilities while maintaining industry required security standards such as PCI for customer and end-user data.
